Liquid Rubber is designed to recoat structurally sound existing roof and protective materials. They should not be used in place of roofing membranes”.

The following are recommended substrates to coat:

Metal – Coated or Galvanized Steel
Weathered Aluminum
Weathered Copper
EPDM Rubber membrane
Concrete (except foot traffic surfaces)
Urethane Foam
Primed Wood
Fiberglass
PVC Sheet and Pipe
Acrylic Sheet
Sponge Rubber insulation

Do Not use Liquid Roof or Liquid Rubber on the following substrates: We do have other product solutions below.

Built up asphalt roofs
Asphalt shingles
Modified asphalt roll roofing
Stainless steel
Glass
Silicone caulk
Foot traffic surfaces
Hypalon Membrane

****For these type of application please refer to our other site <http://www.fixallroofs.com>.
For tar and asphalt based systems you need to order the **PRIMELOCK** and **ENERGYGUARD**.****
